

NHS Lothian

Healthcare Governance Committee
27 September 2022

Fiona Stratton, Chief Nurse, Midlothian HSCP

MIDLOTHIAN HEALTH AND SOCIAL CARE PARTNERSHIP: ANNUAL REPORT

1 Purpose of the Report

- 1.1 The purpose of this report is to recommend that the Committee take moderate assurance that Midlothian Health and Social Care Partnership has robust systems and processes in place to ensure the provision of safe, effective and high-quality care across the Partnership.

Any member wishing additional information should contact the Executive Lead in advance of the meeting.

2 Recommendations

- 2.1 The Committee is recommended to:
- Take moderate assurance that the Midlothian Health and Social Care Partnership management team have comprehensive systems in place to deliver robust health and care governance across all services.
 - Note the ongoing work to deliver programmes of change and improvement across the Partnership and the governance processes in place to oversee this work, including identification and mitigation of risks to patient safety.

3 Discussion of Key Issues

3.1 Scope of Services

- 3.1.1 The Midlothian HSCP Core Management Team is responsible for the management and oversight of a range of delegated health and social care services within Midlothian and for two hosted pan Lothian services, Dietetics and the Adults with Complex and Exceptional Needs Service (ACENS).

3.1.2 Delegated services delivered by the HSCP include:

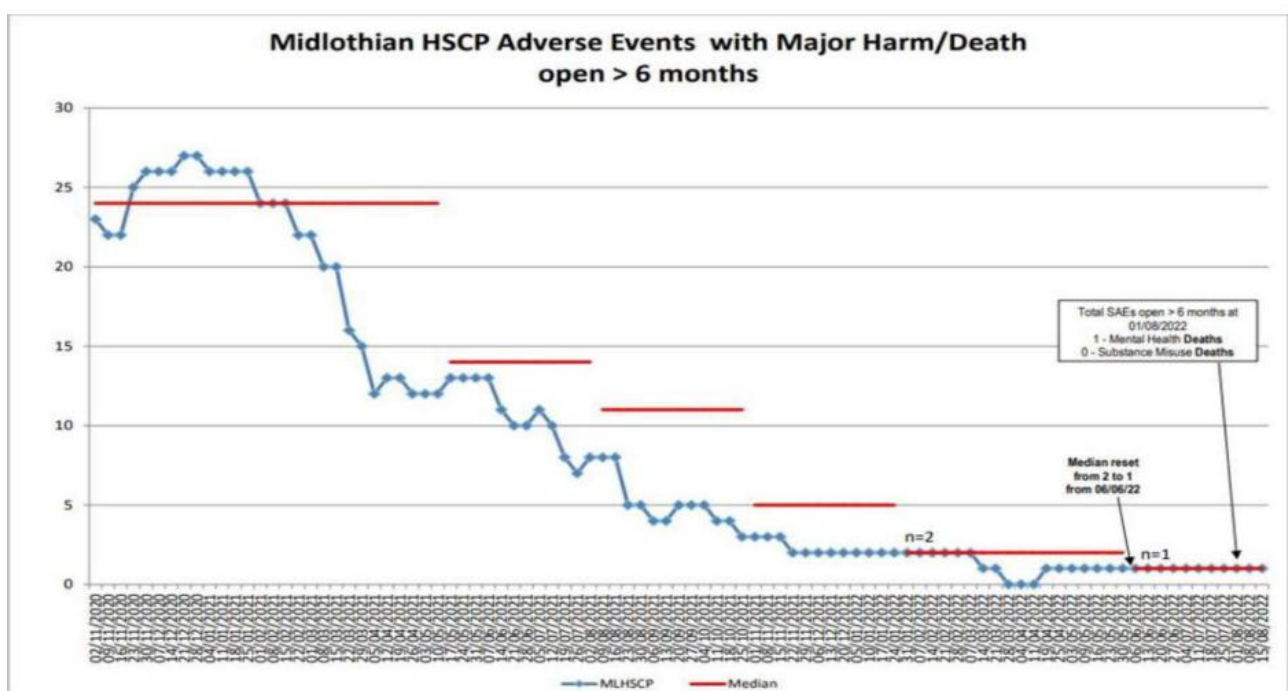

- Adult Social Work
- Care homes and Care Home Support
- Community Adult Mental Health Older Peoples' Mental Health & Dementia
- Community Learning Disabilities
- Community Treatment and Care Centres (CTACs)
- District Nursing
- Hospital at Home
- Intermediate care: Home First and Discharge to Assess

- Midlothian Community Hospital
- Occupational Therapy
- Physiotherapy
- Primary Care (GP, community pharmacy, dentistry and optometry services)
- Public Health and Health Improvement
- Sport and leisure
- Substance Use

3.2 Oversight of quality

- 3.2.1 The Midlothian HSCP management team have developed a governance structure to ensure that services are provided with management support and that oversight is in place for the management of clinical and care quality and governance.
- 3.2.2 Fortnightly Senior Management Team meetings chaired by the Joint Director provide ongoing formal oversight of service developments, discussion of emerging issues, and verbal updates are received on adverse events, complaints and performance, risk and resilience issues.
- 3.2.3 The Midlothian Safety and Experience Action Group (MSEAG) chaired by the Chief Nurse and attended by the Clinical Director, Heads of Service and relevant Service Managers meets fortnightly to manage and have oversight of the review of significant adverse events within Midlothian HSCP. This group undertakes initial consideration of Local Case Reviews into suicides and unexpected deaths of people engaged in mental health and substance use services and commissions external reviews in accordance with NHS Lothian's Management of Adverse Events Procedure. The group has oversight of performance of the performance in relation to the completion of significant adverse events within timescales and considerable improvement has been made (Chart 1)

Chart 1: Significant Adverse Event Reviews Midlothian November 2020- August 2022

Subgroups are established to progress, support and quality assure local reviews of inpatient falls and pressure ulcers. An action tracker is in place to ensure that learning from adverse events is translated into action to improve patient safety. Plans are in development to strengthen the oversight of adverse events and complaints by MSEAG. There is recognition of the need to improve oversight of complaints and adverse events within Midlothian Council services, and to have regular oversight at Partnership level around the reporting of common harms to support early identification of trends and to support improvement actions.

- 3.2.4 Quality Improvement Teams (QITS) are organised at service level and are chaired by Service Managers. This structure includes the Primary Care Cluster Quality Network of all 12 Midlothian GP practices, chaired by the Cluster Quality Lead and attended by the Clinical Director. QITs are required to meet at least four times per year and are required to provide assurance around the safety, effectiveness and person centredness of the services delivered. This includes oversight of the inspections undertaken by regulatory bodies, including the monitoring of action plans for improvements associated with Healthcare Improvement Scotland inspections and Care Inspectorate Inspections of internally provided regulated services
- 3.2.5 The QITS report to the quarterly meeting of the Care and Clinical Governance group (CCGG), submitting a standard template covering the dimensions of quality, improvement activity, inspection updates and identifying service level and escalated risks. The CCGG is attended by the Clinical Director, Chief AHP, Heads of Service, Service Managers, key staff with Quality Improvement, Risk Management and Performance roles and is chaired by the Chief Nurse.
- 3.2.6 Working groups are established to drive improvement work within Midlothian Community Hospital including Medicines Management, Falls and Food, Fluid and Nutrition. Infection Control is a standing item on the monthly Senior Charge Nurse meeting chaired by the Service Manager and links are maintained between the MCH team and specialist Infection Prevention and Control Nurses.
- 3.2.7 The NHS Lothian Accreditation and Care Assurance Standards (LACAS) provide a framework to give organisational and service user assurance that quality person-centred care is being delivered consistently across all NHS Lothian's services. The Framework has been developed to promote Quality Assurance activity which can be utilised to positively inform and drive improvement by engaging front line clinical staff in areas of focus.

The 5 in-patient areas in Midlothian Community Hospital have implemented the Lothian Accreditation and Care Assurance Standards. Participation has been incremental with 2 areas having completed 3 cycles of assurance, 4 out of 5 participating in the 2nd cycle and all 5 areas completing the cycle in June 2022.

The most recent LACAS review cycle identified clear themes, both in good practice and areas for improvement, which will inform quality improvement priorities at both ward and site level. A high standard of care was observed during the Ward Observations visits and a Gold Level of Assurance awarded to Seven Standards. Continuous improvement in standard attainment has been delivered across the 3

cycles, with staff reporting positive experience of involvement in the process and enthusiasm to evidence high standards of person centred and effective care.

3.2.8 Two Pan Lothian services are hosted by Midlothian HSCP, the Adults with Complex and Exceptional Needs Service (ACENS) and Dietetics. Both hosted services have direct operational management from a member of the Senior Management team.

3.2.9 ACENS is under the direct line management of the Chief Nurse who leads on the scrutiny of activity and performance and provides line management and professional support to the Team manager. Finance and performance information is provided within the HSCP and over the last year, more regular reporting to the Lothian Chief Officers has been commenced. ACENS has a local QIT and provides assurance to the Clinical and Care Governance group.

ACENS has experienced a significant increase in demand over the last 18 months, and a waiting list has developed. Discussion of concerns around the growing gap between capacity and demand was undertaken with the Midlothian Joint Director/Chief Officer, the Director for Primary and Community Nursing, and the Finance Business partner. A paper was taken to the Lothian Chief Officers' group outlining the complex challenges faced in growing the service to meet demand. The Chief Officers acknowledged the significant progress the service had made to meet demand and address service challenges over recent years. It was agreed that options needed to be developed around a service model and financial framework that would deliver an approach that would ensure safe and sustainable service delivery going forward. This work is being progressed with the expectation that an option paper will be taken to the Chief Officers' group in October 2022.

3.2.10 Dietetics is a large service delivering across the 3 acute hospitals and 4 HSCPs. Dietitians work as part of the multidisciplinary teams in a range of settings. Under the new leadership team including the Head of Dietetics, and the Chief Allied Health Professional (AHP) in Midlothian HSCP, development is underway to ensure that all aspects of Dietetics Governance Assurance, Quality and Performance are robustly managed, reportable and improvement orientated. One component of this has been involvement in the initial testing period of the NHS Lothian AHP Governance and Assurance Framework. Several areas of improvement have been identified and will be monitored on an ongoing basis via the monthly Dietetics Service Leads group and more formally on a quarterly basis via the AHP Governance and Assurance Framework submissions. This information will be routinely reported internally via the Midlothian HSCP Clinical and Care Governance Group, have oversight from AHP Director in NHSL and can be made available to other HSCP areas as is necessary and helpful to support oversight of the delivery of this hosted service within their integrated services.

3.2.11 Midlothian HSCP directly manages the Health Visiting Service and the delivery of Immunisations to Children under 5 years. Clinical Governance assurance is delivered through the QIT and the Clinical Care and Governance Group. Midlothian HSCP has invested in the leadership of the service and appointed a Clinical Nurse Manager in February 2022.

Improved data quality and availability is driving understanding of the delivery of the Universal Health Visiting Pathway, providing the team with opportunities to benchmark, plan and deliver improvement and developing work to report on

outcomes.

Midlothian Health Visiting has benefitted from significant investment in Health Visitor training to secure a workforce that aligns to population need, but it is recognised that other partnerships in Lothian continue to experience shortfalls in staffing due to the age profile of their workforce and there is recognition of the imperative to work collaboratively to ensure the wellbeing of our youngest citizens.

Pan Lothian work under the oversight and direction of the Children and Young People Health and Wellbeing Board ensures demographic and epidemiological trends inform shared decision making to support workforce and service planning. Health visiting also features in the remit of the Midlothian GIRFEC Board, with managers and clinicians working with multi agency colleagues to deliver the Integrated Children's Services Plan.

3.2.12 Systems and processes are in place deliver oversight and assurance around the work undertaken within Midlothian HSCP services to improve the safety of people at risk of harm.

Public Protection duties are delivered under the oversight of the East and Midlothian Public Protection Committee (EMPPC), and the NHS Lothian Public Protection Action Group (PPAG).

The EMPPC is a multi-agency statutory committee which addresses Adult Support and Protection, Child Protection, Violence against Women and Girls and the Multiagency Public Protection Arrangements (MAPPA) for service users in East Lothian and Midlothian. The committee has a wide range of multiagency senior representatives across services and key agencies and reports to the Critical Services Oversight Group (CSOG) where the Chief Officers of core partners provide strategic leadership, scrutiny, governance and direction to the EMPPC.

The Committee includes key senior officers from the statutory and third sectors who work in partnership to deliver leadership, expertise and support to scrutinise and improve public protection arrangements. Subgroups progress work around Performance and Quality improvement, Learning and Practice Development, Offender Management and Violence Against Women and Girls.

The East Lothian and Midlothian Public Protection Committee and its sub-groups are supported by a team of specialist staff in the East Lothian and Midlothian Public Protection Office (EMPPO) and NHS Lothian's Public Protection team who provide leadership, training, quality assurance and advice across the spectrum of public protection responsibilities.

NHS Lothian's Public Protection Action Group sets and oversees the strategic direction of public protection services across NHS Lothian and provides an annual assurance report to the Healthcare Governance Committee around Public Protection.

3.2.13 Work to reduce the harm associated with substance use is a national priority, and multiagency working across East and Midlothian is the approach for the delivery of the Drug and Alcohol Partnership (MELDAP). Recent funding allocated from the Scottish Government has allowed the Partnership to invest further in services with the aim of improving the reach and effectiveness of our substance use service offer.

A range of services are in place in Midlothian to assist people who face issues related to their own or others substance use. The MELDAP Strategic Group has multiagency representation and meets 6-weekly to deliver oversight of the performance and quality of a range of services. Midlothian HSCP delivers statutory Substance Use services, including the delivery of Medication Assisted Treatment (MAT), and adherence to MAT standards is subject to the scrutiny of a specialist oversight group.

3.2.14 Plans to Improve Oversight of Quality

Midlothian HSCP has the ambition to deliver better care and support for people which delivers best value from the resources invested in health and social care. The HSCP Executive Management Team has committed to implement a Quality Management System (QMS) which will strengthen the links between the clinical and care governance workstreams and the management of performance and resources. The system covers the four domains of Quality Management: Quality Planning, Quality Control, Quality Assurance and Quality Improvement. Implementation of the QMS will require services to produce a service specification, and a service plan which identifies scope of service, resources available, Key Performance Indicators, quality measures and improvement activities which deliver targeted outcomes.

Midlothian HSCP is working with the Scottish Government to create service specifications that are aligned to the Framework for Community Health and Social Care Integrated Services. This is an evidence-based framework that determines the foundations for best practice integrated care. This will support the mapping of current delivery, recognise existing good practice, and support self-evaluation to identify service gaps. This will support the implementation of the QMS and inform recommendations to the Board in relation to IJB Directions for 2023/24.

An integrated approach will be introduced to provide governance assurance on the four governance domains of Safe, Effective, Person-Centred and Regulation. Governance Assurance will be clearly articulated by those responsible for services and action taken with and by the most appropriate people to address any outstanding issues.

This framework will play a clear role in the system of Quality Management in providing **Quality Assurance** alongside, Quality Planning, Quality Control and Quality Improvement (Figure 1.).

Figure 1: Features of Quality Management

3.2.15 Governance and Assurance Framework

The implementation of the QMS supports the provision of assurance around the quality of both delegated and hosted services. Development and testing of the Governance and Assurance Framework (GAF) for Allied Health Professionals (AHPs) working in Acute Services and the four Lothian HSCP's has been led by Midlothian HSCP's Chief AHP. This framework has addressed the challenge of differing operational management lines, reporting arrangements and escalation mechanisms across AHP services. The GAF has been designed to deliver a consistent approach to professional governance and aiming to prevent and reduce the need to duplicate processes and enhance and support use of existing mechanisms.

A trial of the system is underway involving AHPs in HSCPs, including Midlothian, and a selection of single system AHP services including the Dietetics service which is hosted in Midlothian. Midlothian HSCP intends to implement the GAF across all hosted and delegated services over the next year. This will be completed electronically and visible on a dashboard accessed by operational and professional leads.

3.2.16 Performance Management

The Partnership has recognised that approaches to performance management have not kept pace with the rapid redesign of many services during the pandemic.

The Midlothian Performance Assurance and Governance Group (PAGG) has been convened to provide additional capacity outwith the IJB Board meeting to support further scrutiny of performance and support assurance reporting to the IJB. Membership includes Midlothian HSCP's Executive Team, Performance Team, Local Intelligence Support Team and Midlothian Integration Joint Board (MIJB) members, to ensure representation of Midlothian Council, NHS Lothian and the third sector.

Work is underway to design and implement a Performance Measurement Framework based on the 6 dimensions of quality that will provide the PAGG with the right information, in the right format, at the right time, and which will enable informed decision-making at operational and strategic levels.

This comprehensive and ambitious programme of work which includes investment in additional performance management capacity will build quality improvement leadership skills and capacity across Partnership services and creates the potential to work with partners in Lothian and further afield to innovate and improve. The work underway to build skills and confidence to analyse a broader range of activity, process and outcome data will provide insights that inform better decision-making across the organisation, and which will ultimately provide enhanced oversight of the quality of care delivered across Midlothian HSCP.

3.2.17 Systems and Processes to Identify Concerns about the Quality of Care

The Executive Management Team holds brief informal meetings (huddles) three times weekly, and this forum provides an opportunity for any emerging concerns about quality of care to be raised.

Activities that feed into this include the oversight of complaints and adverse events by managers and MSEAG, safety huddles, inspection activity, and the use of data around specific harms, including falls, medication errors, and healthcare associated infection. Safe staffing is the component in delivering safe, effective and person-centred care.

Compliance with the *Safecare* staffing tool is monitored and is noted to be good. The tool is used as the basis for understanding the staffing position in Midlothian Community Hospital. No other service areas within the Partnership have a real time staffing tool available, but the experience of managing workload and staffing pressures during the Covid-19 pandemic has enhanced local practices in collating and reporting staffing information. These continue to be in use at Service level and can be escalated to deliver assurance as required in the event of resilience or other concerns.

The Partnership has developed effective working relationships with the Care Inspectorate, ensuring early action to address emerging concerns in registered services within the Midlothian area.

The Midlothian Care Home Support Team has a specific role in supporting the quality of care for residents in the 10 Midlothian care homes. The team has supported recognition of concerns about the quality of care through their own direct work in care homes and their liaison with other professionals. The Midlothian 'rapid rundown' takes place three times per week and provides senior oversight of emerging issues and improvement work and the opportunity to discuss any concerns raised by care home managers and/ or identified by the Care Home Support Team. This provides a route to discussion and escalation of concerns as required.

Where concerns are raised, the relevant senior manager will bring to the EMT at the earliest opportunity, ensuring early senior decision making and a measured and proportionate response. Examples include the establishment of a weekly oversight group to monitor action plans around staffing and capacity in home care services, the service level response to administration errors in a vaccination centre and the enactment of processes to establish multiagency and large-scale enquiry processes around care concerns in care homes.

Following recognition of concerns around staffing and service delivery and common themes emerging from complaints regarding the community dementia team, plans were developed and implemented to provide immediate support to the team. The Executive Team subsequently approved the proposal to establish a team, including external specialists, to undertake a review of the service and present proposals to the Senior leadership team within the next 3 months.

The approaches described above ensure a clear escalation process through senior managers concerning quality of care issues. In the event that a member of staff felt unable to raise concerns around the quality of care, concerns can be raised through

Partnership representatives, direct contact with the Chief Nurse, Chief AHP or Chief Social Worker, or alternatively through NHS Lothian 'speak up advocates'. If all other routes are exhausted, the formal whistleblowing procedures of NHS Lothian or Midlothian Council provide a confidential route for concerns to be raised.

The Governance and Assurance framework and the developing performance management framework described in this paper will build on existing systems and processes to provide improved oversight of the quality of care across all services and increased sensitivity to indicators that may identify concerns around the quality of care.

3.3 Monitoring Service Quality Outcomes

3.3.1 Services in MHSCP report service quality outcomes internally through Quality Improvement Teams to the Care and Clinical Governance Group. Opportunities to reduce variation in the approach to the reporting of quality outcomes and performance to deliver targets and standards has been recognised, and work to deliver a more consistent approach is underway.

3.3.2 The implementation of the Governance and Assurance and Performance Management frameworks described in this paper will take forward work that will ultimately support all MHSCP services to report an evidenced level of impact and assurance that relates to a service specification and objective targets and standards.

3.3.3 A quality planning approach has been adopted to five spotlight areas of work in year one of the (draft) MIJB Strategic Plan 2022-2025 and a system for planning, monitoring and reporting has been established. The five areas of 'Spotlight' work for first year of the plan are:

- Frailty
- Midlothian Community Hospital
- Primary Care
- Mental Health and Learning Disabilities, and
- Workforce

Staff working in these five focus areas are already involved in work to test ideas and improve and share lessons to evidence the delivery of high-quality care. Integrated Project Management support has been invested in to accelerate the progress of existing service workplans, workforce development plans, individual appraisals and PDPs. To avoid additional layers of scrutiny and make best use of existing mechanisms, oversight of this work is located within existing Planning, Performance and Programme functions, providing structured opportunities to share learning across all five areas with monthly reporting to SMT and SPG (bi-monthly to IJB). Each spotlight group will ensure that cross cutting enablers and Digital, are embedded in the planning process. The approach has been designed to create opportunities for teams to develop and test new ways of working, aligned with other programmes (e.g. LACAS).

3.3.4 The Partnership is continuing work with its third-party partner, *Matter of Focus*, on outcome mapping using the *OutNav* approach. Work to develop quality management and performance measurement approaches and to relate these to IJB Directions, sits

alongside work on *OutNav* to capture and link a wide range of evidence for evaluating progress in delivering outcomes.

- 3.3.5 MHSCP services are subject to external inspections from statutory bodies. This includes Healthcare Improvement Scotland, the Mental Welfare Commission and the Care Inspectorate. These reports are noted at the SMT and reported through the QITs and CCGG. Immediate action is taken where internal concerns or external inspections identify improvements are required to address standards of care. Operational and professional leads have shared oversight of action plans. Implementation is led by Service Managers and progress monitored and supported through operational and care and clinical governance routes, ensuring the implementation of actions which deliver sustainable improvement.
- 3.3.6 The development of primary care service re-design in the context of delivery of the new GMS contract 2018 is being planned with the seven key principles of Quality in mind. This change has already started with the move away from clinical assurance provided by the previous Quality and Outcomes Framework (QOF) introduced in the 2004 GMS contract. The new approach was introduced by the GMS Statement of Financial Entitlements for 2016-17 and sees all 12 of our local GP practices working together in a single Quality Cluster with the HSCP and NHS Lothian to identify local priorities to improve the quality of services and outcomes for people.

3.4 **Impact on People Experiencing Care**

3.4.1 Gathering and Responding to Feedback

Services across Midlothian HSCP are utilising a range of approaches to gather and respond to feedback from people who use our services, their families and carers. These are reported by services through their QITs to the CCGG. Some examples include:

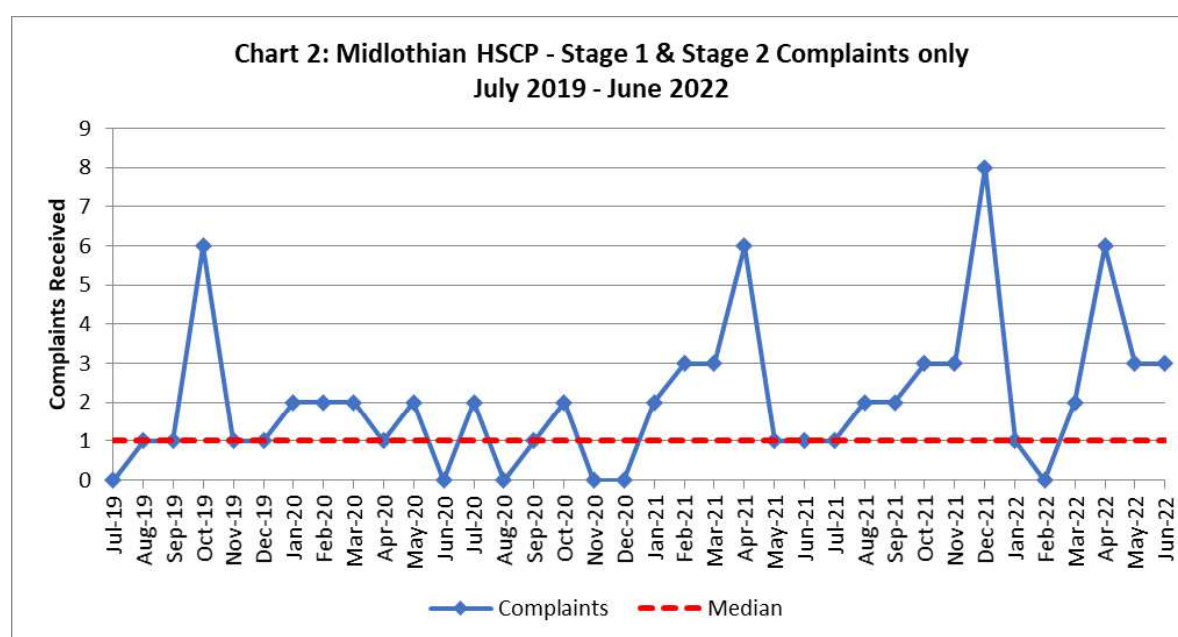

- *Care Opinion* is promoted for those who use Midlothian Community Hospital and the Hospital at Home service. Feedback is relayed to relevant staff who utilise learning to drive change and improvement. Work is ongoing to explore the potential for *Care Opinion* to be used more widely across Partnership services.
- Earlier this year, the team at Midlothian Community Hospital undertook a survey of stakeholders asking, '*What matters to you* about Midlothian Community Hospital?'. The team received predominantly positive feedback, with the main request being that the Community Hospital be resourced to provide a wider range of services for local people. The survey identified that stakeholders find the hospital takes a person-centred approach, staff are kind and care is provided in an environment that is clean and welcoming. A creative approach to the feedback was taken and word clouds, '*wardles*', were developed and framed to provide ward staff with a daily reminder of the positive difference they have made to patients and their families.
- A project to develop an understanding of the experience of people whose family

member received end of life care in Midlothian Community Hospital or from the Midlothian District Nursing Service is nearing completion. The project, funded by the Scottish Government, has taken an experience-based co-design approach, and the final report is in preparation. Staff involved in the project have found the positive feedback on the end of life care they provided encouraging at a time where demand and capacity present daily challenges and where staff may question the impact they have. A huge amount of data has been gathered and the potential to use this to further understand and improve the delivery of end-of-life care is being explored.

Learning from these projects, and those undertaken in other services, will continue to be shared with the aim of promoting ongoing work to gain meaningful feedback which can be used to shape and improve our services.

3.4.2 Managing and Learning from Complaints

All Midlothian HSCP services, including Primary Care, have a formal complaints procedure which is advertised and made available to patients on their request, and a standardised process is followed to deliver a response to the complainant within set time scale. Midlothian HSCP receives a small number of complaints and the systems for oversight and scrutiny aim to improve our performance to deliver responses to Stage 1 and Stage 2 complaints within the Scottish Complaints Ombudsman's targets. Chart 1 shows 74 complaints received about NHS services within the partnership over the 3-year period August 2019 – July 2022, with a stable median of 1 complaint received per month (Chart 2). It should be noted that independent contractor GP practices handle their own complaints separately, and complaints made about MHSCP services via Midlothian Council are not included in this data. Plans are in development to develop integrated oversight of complaints across all MHSCP services.

The fortnightly SMT has oversight of response times for complaints, ensuring real time actions are agreed to respond to the concerns people raise about the care provided.

A Lothian wide short life working group is underway to address improvement in complaints handling and it is expected this will be rolled out in Midlothian within the next 6 months. The development of MSEAG provides an opportunity to consider the alignment of NHS and MLC complaints handling processes, and how learning from complaints and feedback has greater priority and visibility in relation to the work to improve the quality of experience and outcome for Midlothian residents.

3.5 Impact on Staff

- 3.5.1 Midlothian HSCP recognises our workforce as our greatest asset but in line with the national picture, recruiting and retaining the workforce we need to deliver our ambitions represents our biggest challenge. The Senior Management Team is prioritising workforce engagement, continued investment in our Wellbeing Lead post and the development of our HSCP workforce plan.
- 3.5.2 A range of mechanisms are in place to hear staff experience including team meetings, leadership walk rounds, *iMatter* and exit questionnaires and the Trickle app reported last year. NHS Lothian Partnership and Midlothian Council Staff Side representatives attend fortnightly Senior Management Team meetings and provide valuable input into discussions and decisions. A regular Partnership meeting, chaired by the lead Partnership representative, ensures a particular focus on staff experience and views.
- 3.5.3 Awareness has developed of issues that are important to our staff group and of work needed to support improved staff engagement. Our teams continue to face the challenges associated with the COVID-19 pandemic, workforce pressures and increasing demand and complexity in the context of concerns around the cost of living, climate change and geo-political instability. A Senior Manager is taking forward work on a Communication and Engagement Strategy and a Communication Plan which will deliver a more cohesive approach, offering staff across the partnership opportunities to identify how they would like to give and receive information. While Executive Team members are regularly 'out and about', this refreshed approach will provide focused time for front line practitioners to meet and discuss their experience of delivering care to people in Midlothian with Senior Managers.

3.6 Delivery of Safe Care

3.6.1 Learning from Adverse Events

Organisation and system-wide learning from adverse events and complaints is a critical component of improving the quality of care. The Midlothian Safety and Experience Action Group (MSEAG) has driven work to improve performance in relation to the completion of Significant Adverse Event (SAE) reviews to meet Healthcare Improvement Scotland key performance indicators (KPI's). This has reduced the time taken to identify and address factors that contributed to the adverse event to prevent similar harm occurring in future.

SMT receives fortnightly updates on performance for all adverse events. While SAE review performance against timescales is much improved, work is continuing to maintain performance and assure the quality of the reviews. A programme of training will be delivered in September and October for all managers involved in the review of adverse events with the aim of improving the quality of investigation, action planning for improvement and shared learning.

Chart 3 illustrates the reporting of all adverse events in Midlothian HSCP with the increased median noted last year remaining stable.

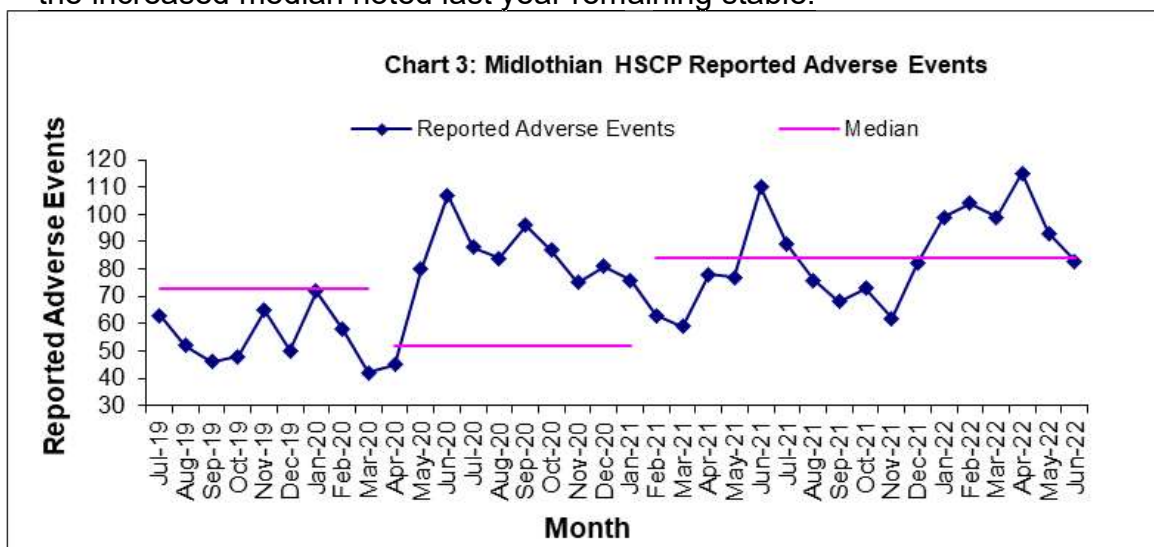

Chart 4 illustrates that the adverse events resulting in major and moderate harm are maintained at a stable median.

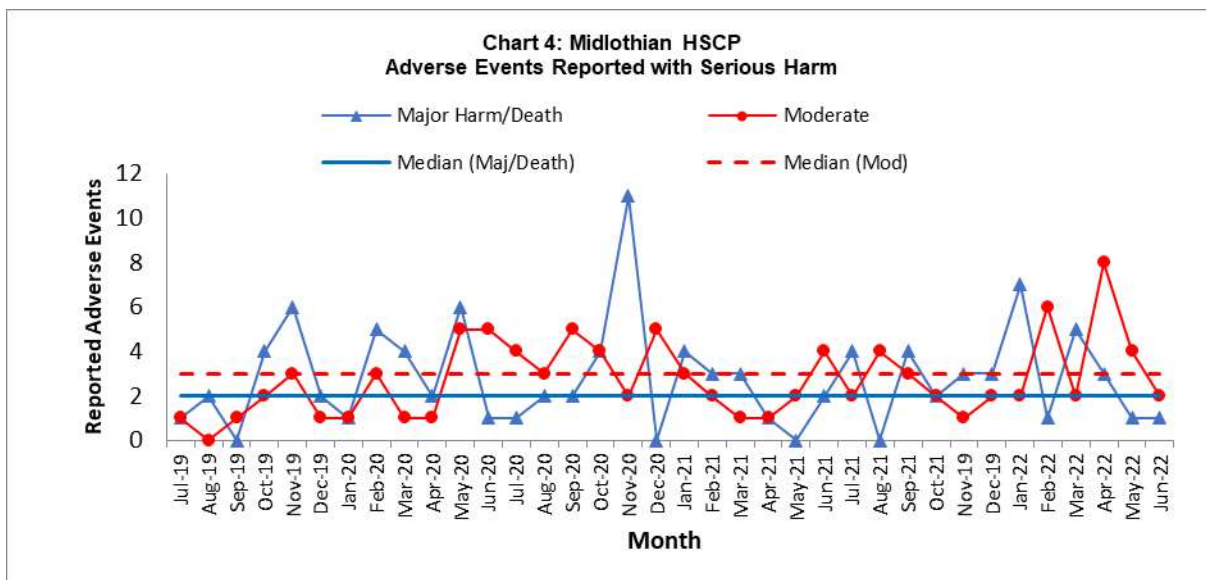

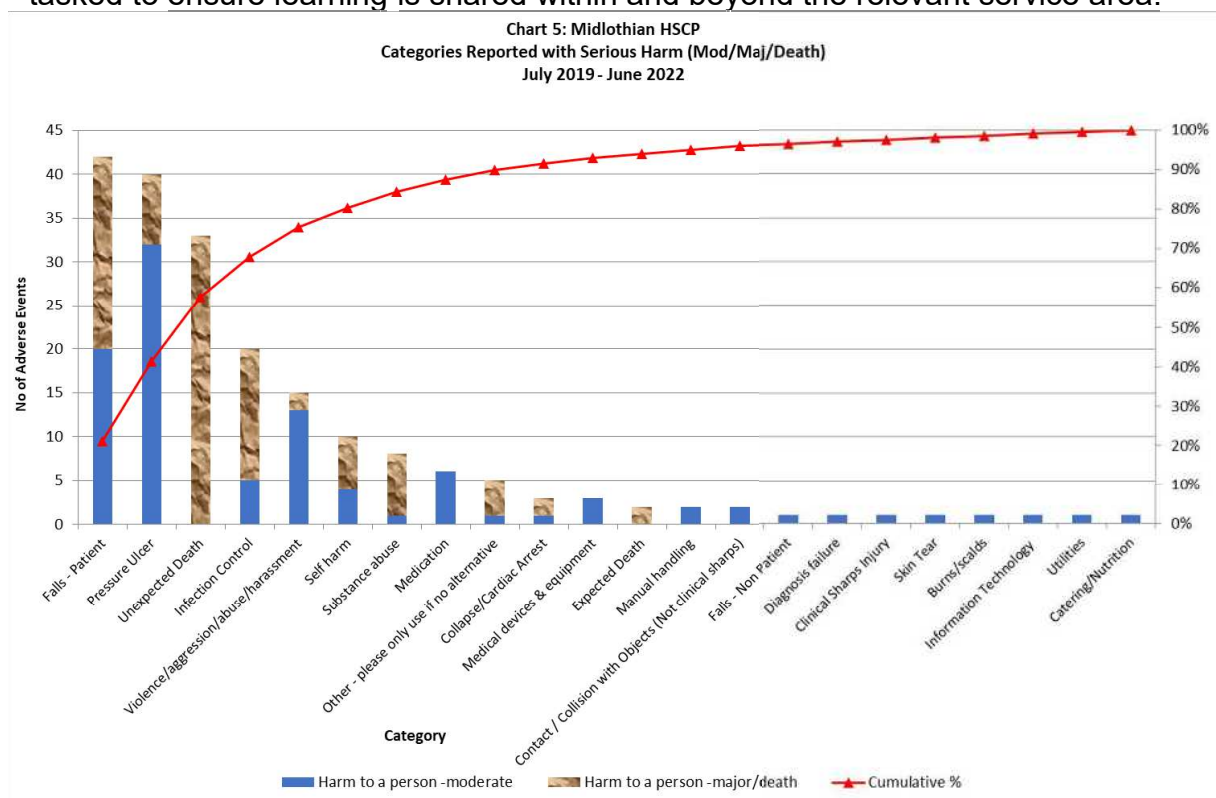

Chart 5 illustrates the breakdown of adverse events with serious harm by category. The Lothian Accreditation and Care Assurance Framework (LACAS) is now fully implemented in Midlothian Community Hospital, and supports the monitoring of the most common harms. LACAS improvement work and a Falls Improvement Working Group support ongoing work to address underlying causes of harm. Working Groups chaired by Service Managers bring a range of perspectives to the investigations into

the occurrence of pressure ulcers and falls with serious harm. These groups are tasked to ensure learning is shared within and beyond the relevant service area.

3.6.2 Drug-related Deaths in Midlothian

In 2021, 23 drug-related deaths were recorded in Midlothian, of those, 16 were men and 7 women. This represents an increase of 2 from 2020. Midlothian's trends reflect national data which shows that there was reduction in male deaths but an increase in female deaths.

Data has identified that 14 (61%) of the people whose deaths were identified as drug related were not involved in services. The development of the assertive outreach model and work to increase the numbers of people who use substances to engage with services is critical and is being taken forward within Midlothian HSCP, with additional investment as described earlier in this report.

Midlothian teams work with local partners delivering a range of initiatives to support people and reduce the harmful impact of long-term drug use. A holistic approach which addresses housing needs, family support and providing person-centred treatment is adopted alongside education, training and employment opportunities.

Work is underway to create a more robust performance culture, improved use of measurement and further work to implement evidence-based approaches which have been shown to reduce drug related deaths.

3.7 Equitable care

3.7.1 An imperative for Health and Social Care Partnerships is their work at a population, community, and individual level to address inequality. Midlothian HSCP has developed effective integrated working and strong relationships with colleagues in

NHS Lothian's Public Health Directorate to progress this objective. This enables cross cutting, integrated work across our services as evidenced in our Strategic Plan. The Partnership and the Integration Joint Board are conscious that the COVID 19 pandemic has magnified health inequalities, and work continues to address the impact of this at strategic and operational levels.

- 3.7.2 The Joint Strategic Needs Assessment provides equality data to aid understanding of current and emerging needs and support planning and action to address inequalities. Integrated Impact Assessment (IIAs) are a requirement for new policies and proposed service changes. With the implementation of the new Strategic Plan and the programme of recovery from the impacts of the pandemic, we anticipate an increase in the number of IIAs required. Training on IIAs is delivered by Midlothian Council available to Midlothian HSCP staff and volunteers.
- 3.7.3 The Partnership recognises the importance of building expertise to embed equality and rights in service design, delivery and review. Training is available to colleagues across the HSCP to improve their understanding, knowledge and skills around equality and diversity as well as an understanding of the public sector equality duty and its relevance to their roles. Our approach to the recommissioning of the care at home service included training for staff from the British Institute of Human Rights and creating a monitoring and evaluation framework. It is the Partnership's intention to build on this experience for future commissioning by the HSCP.
- 3.7.4 Membership of The Midlothian Council Equalities Forum will be extended to Midlothian HSCP employees. This Forum is made up of employees representing all nine protected characteristics, and others who support the aims of the forum. The forum will be supported by the Equalities Engagement Officer and Corporate Equality, Diversity & Human Rights Officer. It works to embed equality and fairness of opportunity across the council and HSCP, and to contribute to employee and community equality initiatives. Where required equality and diversity training will be provided to Forum members.
- 3.7.5 The Health and Social Care Partnership Website continues to be developed to ensure a wide range of information on the services provided is accessible to those with digital access. This includes Reachdeck which aims to help improve the accessibility, readability and reach of online content.
- 3.7.6 A small study undertaken in in 2021 evidenced the need to address digital exclusion in Midlothian. In response, digital skills development work is progressing to support people who want to, to access health and social care digitally. Training was developed and offered to HSCP and third sector staff working locally. Digital inclusion now forms part of the Midlothian HSCP Digital Implementation and Delivery Plan 2022-25. Collaborative work is progressing with the Community Planning Partnership to increase opportunities for people to have access to a device, connectivity, the means to pay for it, and basic digital skills.
- 3.7.7 The Partnership continues to invest in the provision of the Health Inclusion Team, providing 1:1 and group support from specialist Nurse Practitioners to support:
- people in homeless accommodation,
 - people in receipt of justice services,
 - carers,

- people in receipt of drug and alcohol services,
- Gypsy Travellers
- people <55yrs who have had more than 3 attendances at emergency departments in the Lothians within the last year.

3.7.8 The Mental Health, Substance Use, Public Health Practitioners, Health Visiting and Vaccination teams are examples of services who have actively developed approaches to address the access and uptake of services by groups in our communities who are less likely to access services and experience poorer outcomes as a result.

3.8 Workforce Management and Support

3.8.1 Workforce capacity is the key risk in the delivery of safe, effective and person-centred care. Extensive work has been undertaken to develop Midlothian HSCP's Draft Workforce Strategy which was submitted to the Scottish Government at the end of July 2022. Work will continue in the autumn to finalise and implement this once feedback is received.

3.8.2 The development of the Strategy has prompted a review of our staff governance infrastructure and identified the work needed to address gaps in the data available to us. The lack of comparable data across all occupational groups limits our ability to critically examine the current workforce position in totality, thereby supporting integrated planning for future workforce requirements. Nursing and AHP workforce planning is at a more advanced stage than for other occupational groups, with work progressing to ensure compliance with Safe Staffing legislation, and to develop creative approaches to service needs including Advanced practice and Non-registered roles.

3.8.3 Detailed plans have been developed at a partnership level for services to support the Primary care Improvement Plan, in particular the development of pharmacotherapy, Musculo-skeletal and Community Treatment and Care (CTAC) services. Additional information about this is provided in section 5.2. The Executive Management Team has committed to implement a refreshed workforce planning and governance infrastructure supported by investment in capacity to deliver on our workforce planning needs.

3.8.4 Training and development plans are developed at a service level, with NHS Lothian's Clinical Education Team and Midlothian HSCP's Learning and Development Team commissioning and providing a range of education and training opportunities for staff. The Governance and Assurance Framework and Quality management approach will bring a more cohesive approach to understanding and providing assurance in relation to the Partnership's workforce needs.

3.8.5 Midlothian HSCP has invested in the establishment of a Clinical Educator post in Midlothian Community Hospital as an approach to supporting staff in the workplace. This role increases the support staff have to maximise skills and learning in practice and carries a remit for non-registered and registered staff and students. Evaluation of the role will address some of our assumptions on recruitment, retention and the support available for staff to provide quality care. Although the post has only been in place for 2 months, the early evidence of impact on induction processes, practice

learning for students, data availability on staff training and observed care and documentation is encouraging. With workforce challenges driving the need for innovative approaches to attract, train and nurture our teams, the evaluation of this post will support the Partnership in delivering its ambitions to ensure staff are skilled and supported to provide high quality care as close to home as possible.

3.8.6 Wellbeing Delivery Plan

Underpinning the partnership's commitment to staff support and engagement, investment in our Wellbeing Lead post continues with the aim of delivering innovative solutions which improve and support wellbeing across all the teams in Midlothian Health & Social Care Partnership. A Staff Wellbeing Delivery Plan has been implemented over the last year covering the domains of engagement, communication, access to support, leadership, mental wellbeing and environment. Initiatives include work to improve access to essential facilities for all community-based staff, a range of health awareness and health promoting activities, work to develop the availability of peer support and to improve awareness and uptake of mental health and wellbeing services.

3.9 Quality Improvement-based Leadership

3.9.1 Midlothian HSCP has made progress in developing a more cohesive and consistent approach to Quality Improvement based leadership. The implementation of the Quality Management System and the work on our Spotlight Programme and Performance Framework will enable us to address this in a methodical and consistent manner. This report has already described examples where staff are developing the knowledge and skills to enable them to test ideas and improve and share lessons to deliver high quality care, and some examples are provided below. This will be more widespread as services develop annual improvement plans.

3.9.2 A key enabler of Quality Improvement based leadership in Midlothian is our digital transformation programme, and the Partnership's commitment to this is evidenced by the recent appointment of a Digital Programme Manager. In Midlothian, Digital is framed as a way of doing things which enhances our ability to deliver person centred services by creating the conditions to respond to the challenges we face in a consistent, high quality, and progressive way.

Digital is cross cutting through all our work, with the expectation that service design and development is enabled by technology, creating value in new ways. Digital will support:

- The creation of new models of care
- Designing and deliver the best possible user experience with increased access and choices
- Developing technology-enhanced business processes and planning
- Supporting our staff, partners, and citizens to use and develop the confidence, knowledge, and skills to be involved.

The Midlothian HSCP Digital Programme and Oversight Board is established to co-ordinate, direct, and oversee all digital activities and the structure includes a Senior Responsible Officer, The Chief Allied Health Professional (AHP) who provides a direct link to the Senior Management Team (SMT).

3.9.3 A multidisciplinary group involving clinical staff and managers from a range of services meets quarterly to have oversight of palliative and end of life care services. This is supported by links to the Lothian Palliative Care Managed Clinical Network. The group provides an opportunity to consider available data, identify gaps, share good practice, promote education and awareness and support quality improvement. Examples include:

- the implementation of a new pain assessment tool within Midlothian Community Hospital which has some potential for use in care home settings.
- Community Respiratory Team participation in a multidisciplinary meeting with hospice and community clinicians which aims to improve pathways for patients with severe Chronic Obstructive Pulmonary Disease (COPD) with the aim of delivering the most appropriate and holistic support in appropriate settings.
- a project to improve the quality and quantity of Anticipatory Care Plans in care home settings
- A Scottish Government funded evaluation and co-design approach to capturing feedback from families whose relative received end of life care from the Midlothian District nursing Service or in Midlothian Community Hospital which is nearing completion.

3.9.4 Midlothian has been exploring work to improve access, experience and outcomes for patients under the heading of 'Potentially Preventable Admissions'. A programme of data driven improvement work has been progressed by a multidisciplinary group of clinicians and managers. The 'top 5' admission reasons for bed days for unplanned admissions were identified, and improvement cycles to progress understanding and drive change in pathways for the management of heart failure, COPD, cellulitis, pneumonia / flu and diabetic complications have made tangible differences to pathways, patient experience and bed utilisation.

4.0 Key Risks

4.1 The Midlothian HSCP Strategic Risk Register identifies a number of risks and the key risks are identified as:

- Capacity of to meet increased demand due to increasing population, age, and frailty –addressed in the Primary Care Improvement Plan and on the NHS Lothian Corporate Risk register, see also section 5.
- Lack of availability of workforce with appropriate qualifications or skills, including General Practitioners, Staff Nurses, Advanced Nurse Practitioners, Advanced Physiotherapy Practitioners, District Nurses, and Social Care Workers - addressed in the HSCP Workforce Strategy. While concerns exist across all groups and reflects the National picture, District Nursing and Social care workers are a significant current concern.
- Emergency admissions and Delayed Discharges, particularly in relation to care at home capacity –addressed through Care at Home recommissioning, Delayed Discharge plans and Acute Services Planning and Strategic Plans. Despite growth in care at home capacity, demand continues to outstrip the rate of workforce supply.

4.2 Oversight of Risk Management

As a division of NHS Lothian, Midlothian HSCP is compliant with the NHS Lothian Risk Management Policy. The Risk Management process within Midlothian was audited in 2021 and the finalised report confirmed that the Risk Management processes within Midlothian provided high assurance and demonstrated best practice in several areas:

- Midlothian HSCP Senior Management Team meet every 2 weeks and risk is a standing agenda item.
- The Senior Management Team is supported by 4 committees (Business Management Governance, Finance and Performance, Staff Governance and Clinical Care Governance) each of which have risk as a standing agenda item.
- Service level risks registers are locally managed and brought to Business Management Governance for oversight and escalation review.
- Risks are routinely monitored through these escalating levels with additional risk reviewed held with Midlothian Council and Midlothian IJB both strategically and operationally.
- Each risk recorded either operationally or strategically have actions associated to mitigate the risk, these are routinely monitored through the appropriate level of monitoring as mentioned above. Impacts of actions are monitored by the outcome, where improvement is not measurable, additional actions will be assigned to further mitigate the risk.
- Each risk has a risk owner identified who is the accountable person for managing the related actions and providing routine updates on the status of the risk.

4.3 Resilience and Major Incident Planning

Midlothian Health and Social Care Partnership supports its partner organisations, NHS Lothian and Midlothian Council, to deliver their obligations as Category 1 responders. The Partnership provides Midlothian IJB with any relevant assurance in relation to incident management and response which supports its roles as a Category 1 responder.

Midlothian Health and Social Care Partnership maintains major incident plans in line with NHS Lothian's Resilience Policy and provides assurance through NHS Lothian's reporting cycle on resilience, major incident planning and business continuity. A virtual control room is in place for incident management. Service Managers are required to review and update their service-specific resilience and business continuity plans which feed into the overarching Midlothian Resilience Plan.

5.0 Risk Register

- 5.1 There are no new risks for the NHS Lothian Risk Register. Operational risks are captured in the Partnership Risk Register, which is updated and reviewed regularly, and when required escalated to the NHS Lothian Corporate Risk Register.

5.2 HSCP mitigation plans contribute to the following risks on the NHS Lothian Corporate Risk Register:

- 5186 4 Hours Emergency Access Target
- 5187 Hospital Bed Occupancy (Previously Timely Discharge of Inpatients)
- 3829 Sustainability of Model of General Practice

5.3 4 Hours Emergency Access Target

Midlothian HSCP has put in place strategic and operational mechanisms to mitigate risks associated with the 4-hour access target. A data driven approach identifying the most common presentations has been adopted to target effort where it will have most effect.

The 'Flow Team' has developed to track admissions, including the development of a single point of access. This supports our Discharge to Assess team to 'pull' patients from the Emergency Department as well as from the inpatient setting. Work described earlier in this paper around 'Potentially Preventable Admissions' has been progressed to develop and promote alternatives to Emergency Department attendance, and a range of service responses have been put in place.

5.4 Hospital Bed Occupancy (Previously Timely Discharge of Inpatients)

Midlothian has invested in substantial infrastructure to support clinically effective 'Home First' pathways which provide care as close to home as possible and thereby mitigate risks associated with hospital bed occupancy. This work is being further developed through our engagement with the programme of work on Discharge without Delay and is delivered through integrated, multiagency approaches which link with third sector capacity and carer support.

In-patient admissions to acute services are tracked by our 'Flow Team'. This supports identification of patients who can receive their treatment at home under the care of the Discharge to Assess or Hospital at Home teams, or who can receive their care in Midlothian Community Hospital where the Partnership has maintained the 20 additional beds in Glenlee ward.

Capacity in both Hospital at Home and Discharge to Assess has been developed to support flow by providing alternatives to hospital-based care for Midlothian residents, which includes acute care at home, rehabilitation to support early discharge and bridging care at home packages. The In-reach social work team supports early discharge planning for patients who have complex and longer-term care needs.

5.5 A comprehensive analysis of the progress and risks associated with sustainability of the model of General Practice in Midlothian has been undertaken by the newly appointed Clinical Director. The Primary Care Improvement Plan has the oversight of the Midlothian Primary Care Planning group, The Director of Primary Care and the LMC.

5.5.1 Progressing well

The latest revision of the Midlothian Primary Care Improvement Plan was reviewed and approved by the Lothian GP sub-committee earlier this year.

There are currently no closed practice lists in Midlothian (although some remain partially restricted) and no directly managed section 2C practices. A full premises review has been undertaken. Financial assistance has been given several practices to assist with premise alterations to accommodate new PCIP staff. Plans are in progress for the HSCP to employ 2 full-time salaried GPs to support practices identified as facing the most significant risk to the GMS contract

All 12 practices have Musculo-Skeletal Advanced Physiotherapy Practitioner services in place. Full Community Treatment and Care (CTAC) access is in place and partial access to phlebotomy and chronic disease monitoring data collection is in place across all 12 practices. All vaccines have been transferred from all 12 practices and all have partial access to Primary Care Mental Health Nurses. Partial level 1 Pharmacotherapy services including Medicines Reconciliation in place across all 12 practices.

Successful 'Preventing Potentially Avoidable Admissions' work, e.g., heart failure, and local frailty initiatives and improvement work in anticipatory care planning and identifying patients who should be on the palliative care register are examples of work that is progressing well to address our growing and ageing population.

5.5.2 Particular challenges

The rapid growth and projected age profile of the Midlothian population is more marked than the Scottish average and creates considerable challenges around the mismatch between demand and capacity in Primary Care.

The 2022/23 funding allocation is not enough for full delivery of Memorandum of Understanding (MOU2) ambitions, in particular full delivery of pharmacotherapy services. There is risk that funding may be lost (or shifted laterally away from frontline primary care) if there is ongoing recruitment failure due to national workforce shortages.

A workforce survey was undertaken earlier this year which enabled the collation of a detailed overview of the Primary Care workforce challenges faced in Midlothian. Vacancies across General Practitioner and Practice Nurse roles are well understood and these reflect the national picture and feed into recruitment and workforce development activity.

Work is underway to deliver workforce wellbeing initiatives for all staff groups. Options to develop multidisciplinary skill mix, including the potential of engaging paramedics for cross-locality home visits, and Advanced Nurse Practitioners (ANP) for urgent care are under consideration although ambitions are set in the context of understanding the national picture of workforce availability.

6.0 Impact on Inequality, Including Health Inequalities

There are no new actions arising from this report which would require the completion of an impact assessment.

7.0 Duty to Inform, Engage and Consult People who use our Services

There are no specific changes proposed within this paper which would have an impact upon service users, however the committee should take assurance that the Service continues to maintain an active dialogue with all key stakeholders and consults widely on all service changes as required.

8.0 Resource Implications

There are no resource implications arising from the contents of this paper.

Fiona Stratton

Chief Nurse, Midlothian HSCP
